

Breathing Air Filter CPF-20 for One Operator

This high quality branded product belongs to the product group “operator protection”. The first priority is effective safety for operators. Productivity will increase, if operators feel more secure and comfortable. Clemco safety blast accessories protect the blast operator from excessive heat, cold, dust, and noise.

Breathing Air Filter CPF-20 for One Operator

The breathing air filter reliably filters toxic vapors such as oil vapors, water vapor and particles up to 0.5 µm from the breathing air of the operator. Replaceable filter cartridges with activated carbon and the robust housing guarantee a long service life of the filter. An integrated pressure regulator with pressure gauge makes enables the breathing air filter to be adapted to the respective conditions and to be connected directly to the blast pot, which is operated via compressor. Additional equipment for operation is therefore not necessary, only a 1" hose for connection to the blast pot. An optimal and constant pressure can be provided via the pressure regulator to supply the helmet with breathing air. Together with a helmet, it offers the best possible safety and breathing air supply for the operator, so that he can fully concentrate on the blasting process. Due to its small size and the stand, it is also extremely mobile and can be used anywhere.

Maximum air pressure	8 bar
Restrictions	no carbon monoxide (CO)
